### **PRESS RELEASE**

HEALTH-INFO project of the INTERREG IPA Cross Border Cooperation Program CCI 2014 TC 16 I5CB 009, with the National Organization for the Provision of Health Services (EOPYY) as Lead Beneficiary, had a successful presence at the Pavilion 15 of the Ministry of Health at the 84th Thessaloniki's International Fair! During the exhibition, visitors were informed about the main objectives of the project, such as improving the quality of preventive health care for vulnerable groups (especially children and the elderly), in areas where access to primary health care services is difficult. Visitors were also informed about the educational programs for the general population as well as for the health professionals, regarding common medical emergencies. Furthermore, the public was informed about the provision of a Mobile Medical Unit, that will offer preventive health examinations to the female population (mammography, breast ultrasound) as well as general examinations to vulnerable groups.

Finally, the visitors were informed about the development of an electronic platform, that through a unified information system, will provide information among primary health care units, physicians and also patients in need of emergency medical care.

With the contribution of the Ministry of Health, an informative and public awareness-raising action has been achieved for the HEALTH-INFO project. Main focus is EOPYY's participation in the next exhibition (85<sup>th</sup> TIF), where full information about the project's final outcomes will be provided, giving impetus for a further improvement with regards to the access of vulnerable groups to health care services, particularly in cross-border areas.

*Project co-financed by Community and national funds*
